

Stemronic AI

LEAD GEN PLATFORM

ADMINISTRATOR & MANAGER

Administrator Guide

How to run Stemronic AI — set up your team, feed the lead pipeline, assign work, and track performance.

Audience Admins and managers

Product Stemronic AI — Lead Gen Platform

Covers Setup · pipeline · leads · RFQs · performance · security

Access Full platform

01

Getting started

Everything you do lives in one browser tab — no install needed. Sign in with the email and password you were given.

Sign in

- 1 Open your Stemronic AI URL in any browser.
- 2 Enter your **email** and **password** on the right-hand sign-in card.
- 3 Click **Sign in**. You'll land on the Dashboard.

Find your way around

Where: the dark **sidebar** on the left is your main menu; the **top bar** holds search and your account.

MENU ITEM	WHAT IT'S FOR
Dashboard	Pipeline health and headline numbers at a glance.
My Day	Your own follow-up tasks for today.
Analytics	Deeper charts — segments, funnel, unit economics.
Leads	The full lead database: search, filter, open, assign, import.
Leaderboard	Team performance, targets, and scoring weights.
RFQ Pipeline	Every quote as a card moving toward Won.
Pipeline	Run the AI lead engine (collect / enrich / score).
Compose	Draft and send outreach email.
Team	Add people and set their roles.
Scripts	Manage the call talk-tracks agents use.
Activity	Audit log of everything that happened.

TOP BAR

Press **Ctrl + K** (or **⌘ K**) for quick search. Click your name (top-right) to **change your password** or **sign out**.

02

Set up your team

Give each colleague their own login and the right level of access. Managers own a team of agents; agents only see their own leads.

Where: **Team** in the sidebar.

Add a person

- 1 Go to **Team** and click **Invite** (top-right).
- 2 Enter their **name**, **email**, a **temporary password**, and choose a **role**.
- 3 Save. Share the temp password with them — they can change it from the account menu after signing in.

Roles at a glance

ROLE	CAN DO
Admin	Everything — team, pipeline, all leads, settings.
Manager	Manage their team, assign leads, run pipeline, see all performance.
Agent	Work their own assigned leads — call, email, log, quote.
Viewer	Read-only dashboards and reports.

- 1 To change someone's role later, use the **role dropdown** next to their name.
- 2 To remove access, click the **delete** icon on their row.

TEAMS

Agents you create under a manager roll up to that manager's team view and leaderboard.

03

Feed the lead pipeline

This is the AI engine that finds and qualifies new leads for you. Run it whenever you want fresh, sales-ready leads in the queue.

Where: **Pipeline** in the sidebar.

Run the engine

- 1 Open **Pipeline**. You'll see three stages: **Collect**, **Enrich**, **Score**.
- 2 **Collect** — pulls new companies from Apollo across your Gulf target markets.
- 3 **Enrich** — finds and verifies emails and detects each company's tech stack.
- 4 **Score** — the AI rates each lead 0–100 for fit; anything scoring 45+ becomes sales-ready.
- 5 Click a stage to run it. Watch the status update as leads flow through.

Filter rotation

The rotation panel shows how the engine sweeps the market — each location and company-size segment in turn, so you never pull the same companies twice.

- 1 Review the active profiles in the rotation panel.
- 2 Click **Regenerate** if you change your target settings and want to rebuild the sweep.

GOOD TO KNOW

The score threshold (45) and target filters are configurable. Higher threshold = fewer, stricter leads.

04

Manage & assign leads

The Leads page is your database. Find the right leads and hand them to the right agents.

Where: **Leads** in the sidebar.

Find leads

- 1 Use the **search box** to find a company or contact.
- 2 Use the **filters** (status, source, assigned-to) to narrow the list; click a column header to sort.
- 3 Click any row to open the **lead 360** panel — Overview and Activity tabs, with full history.

Assign to agents

- 1 To assign one lead: use the **assign** control on its row (or inside the 360 panel) and pick an agent.
- 2 To assign many at once: **tick the checkboxes** for several leads, then choose **Assign to...** and pick an agent.
- 3 Already-assigned leads are guarded so they aren't accidentally reassigned.

Import your own list

- 1 Click **Import** and download the **template** so your columns match.
- 2 Fill it in (only **company** is required) and **upload** the file — .xlsx or .csv.
- 3 Rows with an email are marked verified automatically; the rest enter as raw leads.

05

Scripts, RFQs & email

Call scripts

Where: **Scripts** in the sidebar.

- 1 Click **New script**, give it a **name** and a **client category** (e.g. Manufacturing).
- 2 Add **phases** (Opening, Discovery, Close) and one **talking point per line**.
- 3 Save. Agents pick the matching script by category during a call.
- 4 Edit or delete any script from its row. (Scripts are shared across the team.)

RFQ pipeline

Where: **RFQ Pipeline** in the sidebar.

Every quote an agent secures appears here as a card. Drag cards across **New** → **Quoted** → **Won** → **Lost**. The header shows a **weighted forecast** — each stage counts at a realistic probability (New 30%, Quoted 60%, Won 100%).

Email

Where: **Compose** in the sidebar.

- 1 Pick a lead, click **Generate** for an AI draft, edit it, then **Send**.
- 2 Email sending needs a Brevo key configured; the status banner tells you if it's live.

Track performance

See who is doing the work and who is winning — then set the goals that drive it.

Where: **Leaderboard** in the sidebar.

Read the leaderboard

- 1 The **podium** shows your top three; the table ranks everyone by points.
- 2 Use the **All / 30d / 7d** toggle to change the time window.
- 3 Click any agent to open their detail — calls, RFQs, interest, and recent activity.

Set targets & weights (managers)

- 1 In the **Daily targets** panel, set each agent's daily **calls** and **RFQs**; Save.
- 2 Targets drive the **target-vs-actual** charts agents see on their dashboard.
- 3 In **Scoring weights**, adjust how many points each action earns, then Save.

ACTION	DEFAULT POINTS
RFQ secured	40 (+1 per \$1k value)
Reply	15
Call	5
Email	3

Analytics & audit

Analytics shows funnel, segments and unit economics (edit your cost inputs to see cost-per-lead). **Activity** is a full audit log of every assignment, call and change.

Account & security

Your account

- 1

Click your **name** (top-right) → **Change password** to update your own password.
- 2

Use **Sign out** from the same menu when you're done.

Keep the platform secure

- Give each person their own login — never share accounts.
- Use the least role that lets someone do their job (agents don't need manager access).
- Remove logins promptly when someone leaves (Team → delete).

RECOMMENDED

If any demo/test logins still exist, delete them from the **Team** page before going live — they shouldn't have access to real data.
