

Stemronic AI

LEAD GEN PLATFORM

SALES AGENT

Sales Agent Guide

Your day-to-day playbook — work your leads, run great calls, capture RFQs, and hit your targets.

Audience Sales agents

Product Stemronic AI — Lead Gen Platform

Covers Dashboard · calls · email · RFQs · scripts · targets

Time to read ~10 minutes

01

Getting started

Everything runs in your browser. Your workspace only shows the leads assigned to you.

Sign in

- 1 Open your Stemronic AI link and enter your **email** and **password**.
- 2 Click **Sign in**.
- 3 First time? Click your **name** (top-right) → **Change password** to set your own.

Your menu

MENU ITEM	WHAT IT'S FOR
My Dashboard	Today's numbers vs target, your rank and points.
My Day	Your follow-up tasks — what to do today.
Leads	The leads assigned to you.
RFQ Pipeline	Quotes you've secured, moving toward Won.
Compose	Draft and send an email to a lead.
Scripts	Call talk-tracks you can use and edit.
Leaderboard	Where you rank on the team.

TIP

Press **Ctrl + K** (or **⌘ K**) any time to jump to a page or lead.

02

Start your day

My Dashboard

Where: **My Dashboard** (your home page).

See your **Calls** and **RFQs** today against your target, 7-day trend charts, and your current points, rank, and average interest score.

My Day — your task list

Where: **My Day**.

- 1 Tasks are grouped **Overdue**, **Today**, and **Upcoming**.
- 2 Work top-down — clear overdue first, then today.
- 3 Tap the **check** on a task to mark it done once you've made the call or sent the email.

WHERE DO TASKS COME FROM?

Follow-ups you schedule after a call, and any sequence (cadence) a lead is enrolled in, show up here automatically.

03

Work a lead

Open a lead to see everything about it and take action.

Where: **Leads** → click a row.

- 1 Go to **Leads** — you'll see the companies assigned to you.
- 2 Use **search** or **filters** to find one, then click the row to open the **360 panel**.
- 3 The **Overview** tab shows company, contact, score and reason; the **Activity** tab shows every past touch.
- 4 From here you can **Log a call**, **Compose** an email, add a **task**, or enroll a **cadence**.

04

Make a call (Call Console)

The Call Console guides you through the whole call and captures the outcome in one place.

Where: open a lead → **Log call** / **Start call**.

During the call

- 1 Click **Start call** — the timer begins.
- 2 Pick a **script** from the dropdown that matches the client's industry.
- 3 Follow the talk-track phases (Opening → Discovery → Value & Close) as prompts, not a script to read word-for-word.
- 4 Type **live notes** as you talk — anything you'll want to remember.

Wrap up the call

- 1 Click **End call** and choose the **outcome** (connected, voicemail, no answer, callback, not interested).
- 2 Rate the lead's **interest 1–10** — be honest; it feeds your average and helps prioritise.
- 3 If they asked for a quote, toggle **RFQ secured** and enter the estimated **value** (and how many).
- 4 Set a **follow-up** in N days if needed — it becomes a task in My Day.
- 5 Save. The call, notes, interest and RFQ are all logged at once.

WHY IT MATTERS

A secured RFQ automatically appears on the RFQ Pipeline and earns you the most points — so always capture it before you hang up.

05

Send an email

Where: **Compose**, or from a lead's 360 panel.

- 1 Open **Compose** and pick the lead.
- 2 Click **Generate** for an AI-written draft tailored to that company.
- 3 Read it, edit the **subject** and **body** so it sounds like you, and check the details.
- 4 Click **Send**. The email is logged against the lead automatically.

KEEP IT SHORT

The best cold emails are three sentences: a specific reference, the value you offer, and a low-pressure ask for a 15-minute call.

06

Scripts, RFQs & sequences

Use and edit scripts

Where: **Scripts**.

- 1 Browse scripts grouped by **client category**.
- 2 During a call, pick the one that fits the client in the Call Console dropdown.
- 3 Click **New script** or edit an existing one to add your own talking points — phases with one point per line.

HEADS UP

Scripts are shared with the whole team, so an edit changes it for everyone. Add a new one rather than rewriting a teammate's if you're unsure.

Move your RFQs

Where: **RFQ Pipeline**.

- 1 Find your quote card under **New**.
- 2 As things progress, **drag** it to **Quoted**, then **Won** (or **Lost**).
- 3 Keep it current — it's how your pipeline and forecast stay accurate.

Enroll a sequence (cadence)

- 1 From a lead's panel, choose **Enroll cadence** and pick **Standard**, **Fast**, or **Nurture**.
- 2 The steps (calls and emails) are auto-scheduled and appear in My Day so you never lose a follow-up.

07

How you're scored

Your rank rewards outcomes first, but every bit of effort counts too.

Where: **Leaderboard**.

ACTION	POINTS
RFQ secured	40 (+1 per \$1k of value)
Reply from a lead	15
Call logged	5
Email sent	3

- RFQs are worth the most — always capture them on the call.
- Hit your daily **call** and **RFQ** targets (shown on your dashboard).
- Log every call and email — the platform can only score what you record.

SIMPLE DAILY RHYTHM

Clear My Day → work your leads → log every call with an honest interest score → capture any RFQ → set the next follow-up. Repeat.
